

Programme of Integrated course "Advanced Analysis"

This course is composed of 2 Modules: 1) Advanced Analysis 1, 2) Advanced Analysis 2

- Code: DT0114
- Type of course unit: Compulsory (Master Degree in Mathematics curriculum Generale), Compulsory (Master Degree in Mathematical Engineering curriculum Comune)
- Level of course unit: Postgraduate Degrees
- Semester: 1

Number of ects credits: (Master Degree in Mathematics) 6 (workload 150 hours), (Master Degree in Mathematical Engineering) 6 (workload 150 hours)

Teachers: Corrado Lattanzio

- 1 Course objectives** Knowledge of mathematical methods that are widely used by researchers in the area of Applied Mathematics, as Sobolev Spaces, distributions. Application of this knowledge to a variety of topics, including the basic equations of mathematical physics and some current research topics about linear and nonlinear partial differential equations.
- 3 Course prerequisites** Basic notions of functional analysis, functions of complex values, standard properties of classical solutions of semilinear first order equations, heat equation, wave equation, Laplace and Poisson's equations.
- 4 Teaching methods and language**  
 Lectures  
**Language:** English  
**Reference textbooks**
  - G. Gilardi, *Analisi 3*. McGraw-Hill.
  - V.S. Vladimirov, *Equations of Mathematical Physics*. Marcel Dekker, Inc..
  - C.M. Dafermos, *Hyperbolic Conservation Laws in Continuum Physics*. Springer.
  - L.C. Evans, *Partial Differential Equations*. AMS.
  - M.E. Taylor, *Partial Differential Equations, Nonlinear equations*. Springer.
  - H. Brezis, *Sobolev Spaces and Partial Differential Equations*. Springer.
- 5 Assessment methods** Oral exam

Programme of Module "Advanced Analysis 2"

- Code: DT0115
- Type of course unit: Compulsory (Master Degree in Mathematics curriculum Generale)
- Level of course unit: Postgraduate Degrees
- Semester: 2

Number of ects credits: (Master Degree in Mathematics) 6 (workload 150 hours)

Teachers: Stefano Spirito (stefano.spirito@univaq.it)

- 1 Course objectives** Aim of the course is the knowledge of advanced techniques of mathematical analysis and in particular the basic techniques of the modern theory of the partial differential equations.
- 2 Course content and learning outcomes (dublin descriptors)**  
 Topics of the module include:
  - Abstract Measure theory
  - AC and BV functions.
  - Second order elliptic equations.
  - Variational methods.
  - Fourier transforms.
 On successful completion of this module, the student should :
  - Aim of the course is to acquire Knowledge and Understanding of Advanced Techniques of 'Mathematical Analysis.
  - applying the techniques learned to problems of partial differential equations
  - Acquire the ability to understand what methods and techniques can be used in

		<p>various problems involving the partial differential equations.</p> <ul style="list-style-type: none"> <li>• Acquire the ability 'to expose, explain and elaborate concepts and advanced analysis techniques.</li> <li>• Acquire the ability 'to study and understand theorems and analysis techniques from books and advanced research products.</li> </ul>
3	<b>Course prerequisites</b>	A good knowledge of the basic arguments of a course of Functional Analysis, in particular, a good knowledge of the theory of Lebesgue's integral and the $L^p$ spaces. The first module of the course, in particular a good knowledge of the theory of distributions and Sobolev spaces.
4	<b>Teaching methods and language</b>	<p>Lectures.</p> <p><b>Language:</b> English</p> <p><b>Reference textbooks</b></p> <ul style="list-style-type: none"> <li>• L. Grafakos, <i>Classical Fourier Analysis</i> .</li> <li>• P. Cannarsa and T. D'aprile, <i>Introduction to Measure Theory and Functional Analysis</i> .</li> <li>• L. Evand and R. Garipey, <i>Measure Theory and Fine Properties of Functions (Revised Edition)</i>.</li> <li>• L.C. Evans, <i>Partial differential equations</i>.</li> </ul>
5	<b>Assessment methods</b>	Written exams.
